Huge Tracking Dish to Become Available for EME

The <u>InfoAge</u> Science History Museum in Wall Township, New Jersey, plans to make a 60 foot tracking dish antenna available to hams for moon-bounce, secondary to its function as a radio telescope. It was on the InfoAge site, then part of Fort Monmouth, that the US Army's "Project Diana" team in 1946 first received radio signals bounced from the moon.

According to InfoAge's Martin Flynn, W2RWJ, Daniel Marlow, K2QM, an InfoAge board member who teaches physics at Princeton, wants to use the dish, currently under rehabilitation after being dormant since the 1970s, to pursue radio astronomy for instructional purposes. Marlow's primary goal is to restore the TLM-18 dish antenna to working order and use it to see the 21 centimeter radiation from the

Net Control Operators Wanted

Anyone who is interested in honing their operating skills may be interested in joining the WCARC Net Control rotation. Although the weekby-week operation of the Net appears to be routine on the surface, you never know when you might be called upon to handle a net during an emergency situation. This possibility is especially valid for ARES members.

If you are interested, please contact Bob, N1RB, at:

boughton@bgsu.edu, for further information. The net routine is straight-forward and a script will be provided to all volunteers.

Milky Way. But he also wants to observe radio pulsars, and since that activity can be performed at 70 centimeters, the TLM-18 will be made available to the Amateur Radio community for EME at 432 MHz on a secondary basis.

Brain Teasers

- 1. What does a "Maidenhead" grid square refer to?
 - **a.)** a 2° longitude by 1° latitude square, as part of a worldwide numbering system
 - **b.)** a 1° longitude by 1° latitude square, beginning at the South Pole
 - **c.)** antenna made of wire grid used to amplify low angle incoming signals
 - **d.)** antenna consisting of a screen or grid positioned directly beneath the radiator
- **2.** In a circuit with both inductors and capacitors, what happens to the reactive power?
 - a.) it is dissipated as heat in the circuit
 - **b.)** it alternates between electric and magnetic fields, but is not dissipated
 - c.) it is dissipated as kinetic energy
 - **d.)** it is dissipated in forming inductive and capacitive fields
- **3.**What is the power factor of an R-L circuit having a 60° phase angle between voltage and current?
 - **a.)** 1.414
 - **b.)** 0.866
 - **c.)** 0.500
 - **d.)** 1.730

August Contests

The contest lineup for the month of August is given below. Please note that the WARC bands (60, 30, 17 and 12 m) are never open to contesting.

HERE COMES THE SUN -THERE GOES THE SUN

from ARNewsline

Researchers say that this year's solar maximum is shaping up to be the weakest in some 100 years and the next one could be even quieter. This according to scientists who study the solar cycle as it affects our home planet.

One of these is David Hathaway of NASA's Marshall Space Flight Center in Huntsville, Alabama. In an early July teleconference Hathaway told reporters that we are witnessing the smallest solar maximum we have seen in the Space Age. Also, the next one, cycle 25 could be even quieter.

About every 11 years, the Sun goes through a cycle defined by an increasing and then decreasing number of sunspots. The current cycle, known as Solar Cycle 24, has been underway since 2011. Its peak was expected in 2013 but there have been fewer sunspots observed this year compared with the maximums of the last several cycles.

Sunspots are the dark temporary regions on the surface of our home star that are thought to be caused by interaction between the Sun's plasma and its magnetic field. They are also the source of the solar flares and coronal mass ejections that in turn send charged particles into space. Those that hit Earth hold the potential of causing damage to satellites and producing surges in power grids. But they also affect radio propagation by causing short-term high frequency blackouts, while at the same time producing some dazzling auroras above the planet's poles that radio amateurs and others have long used for propagation experimentation. Ham radio operators on 6 meters and above have been

known to make some amazing DX contacts by bouncing signals off auroral trails.

Giuliana de Toma, a scientist at the High Altitude Observatory in Colorado, says that the sunspots occurring during a calm maximum have the same brightness and area as the ones observed during a more turbulent peak. The only difference is that there are fewer of them and that's why low cycles like this one are considered as being weak.

Scientists seem to agree that a small Cycle 24 also fits in with a 100 year pattern of building and waning solar cycles. They say that they don't know yet the exact cause of

this trend, but they note that there were weak solar cycles in the beginning of the 19th and 20th centuries as well as now in the 21st. For ham radio this means that while the various bands are far from dead, their full potential may not come about during this solar cycle.

WESTERN ELECTRIC AND THE 300B TRIODE RETURN

from ARNewsline

The Western Electric name has been resurrected for a new vacuum tube manufacturing venture here in the United States. With its head-quarters in Rossville, Georgia, operation will make vacuum tubes mainly for use in high-end audio components.

While tubes, or valves as they are known in Europe, were once the mainstay of the world's electronics, they were eventually supplanted by transistors and integrated circuits. Soon afterward most United States based manufacturers deserted the manufacture of tubes to follow the

solid state trend. In recent years vacuum tube manufacturing has become the domain of specialty companies mainly in Russia and China, but even they manufacture only the most popular tubes like the venerable 12AX7 and 6L6. These are used in high-end specialty audiophile gear and portable amplifiers preferred by some musicians.

The new incarnation of Western Electric is headed by Charles G. Whitener Jr. Initially it will sell only a handful of different tube types that are exact reproductions of Western Electric "classics," such as the 300B. The latter was a power triode audio output tube that was originally designed to be used in movie theaters sound installations.

EME---from p. 1

Monmouth Amateur Radio Club's carry his spare hand-held trans-(OMARC) N2MO at InfoAge, offers a ceiver battery in his carry-on bag. A gain of 35 dBi at 465 MHz. Project notice within his boarding pass de-Diana occupied the building housing clared: "Lithium Batteries: Carriage N2MO, Flynn noted. The after-effects of Hurricane Sandy continue to hinder the dish

rehab project; power on the InfoAge campus remains out since the storm last year, and the facility is running on generator power. "It has slowed down the efforts at putting the

TLM-18 back into service but has not this caveat, however: "Even if an stopped them," Flynn said, noting item is generally permitted, it may that OMARC members have been behind the project from Day One. It's hoped the dish will be ready for service next year.

Flying With Spare Rechargeable Batteries May **Require Preparation**

from ARRL Letter

FAA regulations let you travel with dry cells in either your carry-on or checked baggage, but prohibit loose lithium batteries in checked baggage. But what about rechargeables in carry-on luggage? Stu Mar-

tin, K2QDE, reports that he ran into The dish, adjacent to the Ocean a small hitch when attempting to of spare lithium batteries is not permitted in checked baggage. If you put a portable electronic device in checked baggage, you may still do so with the batteries installed in the device. Spare lithium batteries in carry-on luggage must have the terminals insulated and must be placed inside a protective case or plastic bag." Martin taped the battery's terminals and stowed it in a bag.

> The FAA rules apply to "consumer-sized lithium ion batteries," including "larger, extendedlife laptop batteries." The FAA adds be subject to additional screening or not allowed through the checkpoint if it triggers an alarm during the screening process, appears to have been tampered with, or poses other security concerns. The final decision rests with TSA on whether to allow any items on the plane." More information is available on the FAA Web site.
